- **Databases:** MySQL, Firebase, MongoDB, Oracle
- **Tools & Technologies:** Git, MS365, Postman, Bruno, Docker, Figma, DBeaver

PROFESSIONAL EXPERIENCE

JUNIOR TECHNICAL CONSULTANT

Via Appia Philippines Inc. | Oct 2025 – Present

- Worked on enterprise digital transformation projects, application enhancements, and production support across financial services, government, and internal platforms.
- Developed and enhanced enterprise workflow applications using Appian and OutSystems.
- Implemented data transformation and validation processes using Oracle-backed systems.
- Built configurable document management solutions including document versioning, SharePoint integration, auto-renaming, and archive automation.
- Integrated enterprise applications using REST APIs and developed bulk upload functionality for cross-system synchronization.
- Implemented approval workflows, request lifecycle management, audit logging, and status tracking.
- Investigated production issues and performed root cause analysis (RCA) for enterprise banking applications within Agile teams.

FULL STACK DEVELOPER INTERN

Gallium31 - Spaceport | Nov 2024 – June 2025

- Worked on full-stack web development projects, contributing to commercial websites and business applications using modern web technologies.
- Developed website components using PHP, HTML, CSS, JavaScript, and WordPress.
- Built and maintained staging and production environments using Git workflows.
- Designed responsive user interfaces aligned with UI/UX specifications.
- Developed a MERN-based Employee Management System featuring JWT authentication, CRUD operations, audit logging, dynamic model generation, and Docker deployment.
- Improved SEO using Yoast SEO and Google Search Console in Agile development.

EDUCATION & CAPSTONE PROJECT

BS IN INFORMATION TECHNOLOGY (Specialization in Mobile and Internet Technologies)

National University Fairview | 2021 – 2025

AGES: Automated Gate Entry System | Thesis Project (2024)

- Developed a scale model of an automated gate entry system for Hillcrest Village using RFID technology and an ESP32 microcontroller with DC motors. Integrated real-time entry tracking in Firebase and built a web portal hosted on the board (HTML5) for live monitoring.
